

# Dima Kiselev

Backend Developer · Python · Go · C++ · Moscow, Russia

GitHub: [github.com/qqwazz](https://github.com/qqwazz) · Telegram: [t.me/onixxed](https://t.me/onixxed) · Email: [offconix@gmail.com](mailto:offconix@gmail.com) · LeetCode: [leetcode.com/u/onixxxxx/](https://leetcode.com/u/onixxxxx/)

## PROFILE

Backend developer. I build microservices, APIs, and high-load systems with Python, Go, and C++. Clean architecture, performance, reliability.

## CORE STACK

|                |                                                          |
|----------------|----------------------------------------------------------|
| BACKEND        | Python (FastAPI, Django) · Go · C++ · gRPC · REST        |
| DATA           | PostgreSQL · Redis · SQLite                              |
| INFRASTRUCTURE | Docker · Linux · Nginx · Gunicorn · GitHub Actions CI/CD |
| TOOLS          | Git · Postman · VS Code · HTMX                           |

## EXPERIENCE

### Backend Developer (intern) — Yandex

Internship · Jan 2024 — May 2024 · Moscow

- Developed and maintained microservices for Yandex search infrastructure
- Designed and implemented gRPC API for request handling in a distributed system
- Wrote unit and integration tests with >80% code coverage
- Optimized server component performance, reduced latency by 15%

### Backend Developer (intern) — VTB

Internship · Sep 2024 — Dec 2024 · Moscow

- Developed microservices for payment processing in a banking system
- Implemented REST API for integration with internal bank systems
- Worked with PostgreSQL, designed schemas for financial data storage
- Containerized services with Docker, set up CI/CD pipelines

## SELECTED PROJECTS

### QW Trading Platform

Crypto exchange with C++ matching engine · 2024

- High-performance crypto exchange with C++ trading core. 6 microservices architecture
- Handles 1000+ orders/sec with <100ms latency
- Matching engine with Price-Time Priority, limit and market orders

Go · C++17 · PostgreSQL · Redis · gRPC · Docker · React

### QW Pay

Payment microservice · 2024

- Multi-currency payment system with real-time conversion (200+ currencies)
- C++ anti-fraud engine, Python scoring for suspicious transactions

Go · C++ · Python · PostgreSQL · Redis · Docker

### ENF Shop

Online clothing store · 2024

- Full-featured e-commerce with catalog, filtering, smart cart and Stripe payments
- HTMX no-reload cart, production-ready Docker (Nginx + Gunicorn)

Django · PostgreSQL · Redis · HTMX · Stripe · Docker
